

What is On Demand Licensing?

Through the innovative technology developed by Cetrus, users can now run Tsoft software on a metered usage and time-period basis as an alternative to paying the up front costs of our traditional license.

Why Use On Demand Licensing:

Pay for only what you need, when you need it

- Users are charged only for the time they use our software, based on an hourly rate, so one or a few planned uses of Tsoft software can be accessed for a project or a finite time period
- Tsoft software is installed and run on your PC; the application is automatically and securely metered in real time by Cetrus

Expense Usage Costs

- Metered usage costs can be EXPENSED to a project or customer using Cetrus' Expense-to-Project™ (E2P™)
- Usage and billing data is recorded and accessed in real-time, and a statement is provided monthly for your internal accounting systems

Avoid Tapping Capital Cost Accounts

- Avoid “budget based” pricing and lengthy approval processes to allocate funds from capital cost accounts to purchase software licenses
- Users can now allocate Tsoft software costs to a project or customer

Eliminate Licensing Compliance Issues

- Cetrus enables unlimited users within your company access to Tsoft software, without licensing restrictions
- Managers create, activate and manage all software licenses in-house; manage user access, assign privileges, and monitor account balances

Mobility and Ease of Access

- Log into your Cetrus account and access Tsoft from your office, home, field site, or anywhere in the world on any PC with an internet connection

Bid Projects with Tsoft

- Effectively bid projects knowing you will have access to Tsoft's valuable software with On Demand licensing

Latest Software Versions

- Zero maintenance or “new version” upgrade fees - On Demand keeps your users maintained and up to date with new releases, free of charge

Time Running Out Alert

- Users are warned before your account funds expire, so that you can save or print your work before the meter stops
- Simply add funds by clicking “Increase Balance”, so that you can continue using Tsoft software

Track Usage Costs

- Gain efficient and competitive project budgeting with the ability to track who uses the software, how long, and on which projects

Create and Export Usage Reports

- Usage reports can be created and sorted by users, applications, project data, time period and calendar dates
- Reports can be exported to MS Excel, CSV or PDF directly from your user account

Credit Card Transactions

- A record of all printable credit card receipts is retained and visible in your Cetrus account
- Each receipt includes 5 user-editable fields for accounting and cost reimbursement purposes

Auto Pause Functionality

- Tsoft will pause the meter (customizable to 10 min timeout), so that if you walk away from the program, you are not charged for not using it. No data is lost in the process, as the user can always re-log onto Cetrus and resume work.

Security

- Cetrus enables Tsoft’s On Demand licensing option with the industry’s latest encryption and obfuscation measures to ensure maximum end user security
- Cetrus provides secure, real-time credit card transactions using PayPal Verisign
